

Inclusive Applications with React

Building the Web for everyone!

*Opinions are my own and not the views of my current or past employers

Alex Arriaga

- A simple Front-end Engineer 😊
- Founder of **Webtraining.Zone**
 - Community
 - Company
- Currently working as FEE at AWS - USA

Before we start...

Being “inclusive” on the Web...

- It is not only about a language or gender
- Please, do not engage in toxic arguments
- **Let's make a better Web for everyone!**
 - With true empathy about others

What do I mean by
“inclusive
applications”?

Requirements

- NodeJS
- IDE/code editor: WebStorm, VS Code
- Yarn
- Modern browsers:
 - Firefox, Google Chrome

Ready?

Activity

Create your first

React app

Simple listing component

Understanding our App

Let's see the basic structure

Let's take some minutes to create our app

Preview in Development Mode

Let's understand what are Yarn/NPM scripts

The most important Yarn scripts

- “**yarn install**” install dependencies
- “**yarn start**” will run a development environment
- “**yarn build**” will create a production-ready application that we can deploy in a web server.

Activity

Create your first component

Simple listing component

Let's create our first component

Activity

Enhance your first component

Let's use a more complex layout with
Bootstrap (CSS framework)

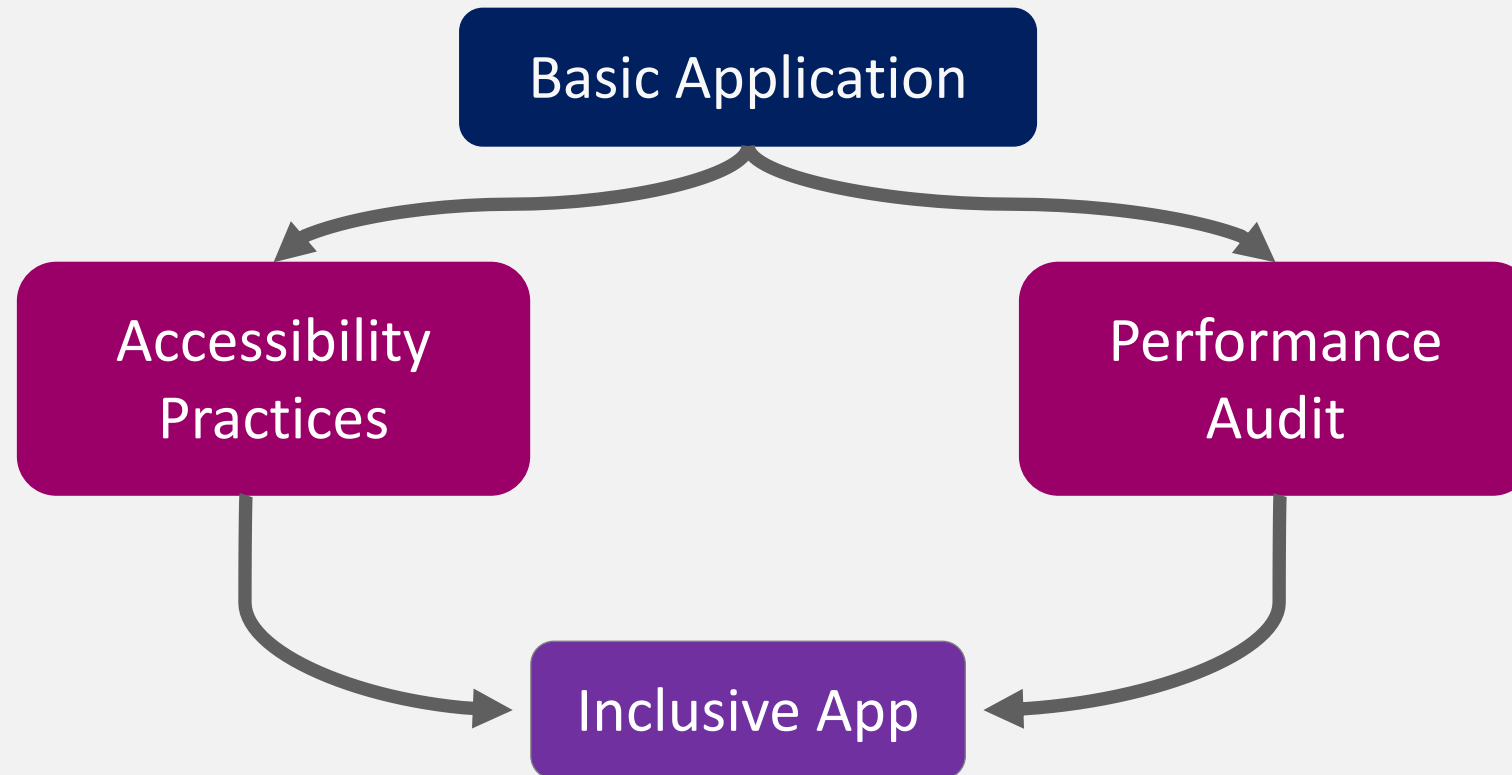

Let's enhance our first component

Sweet!
Let's go to the
next level!

Inclusive Web?

Two main pillars

Wait! But what is accessibility?

Screen reader?

Accessibility = A11y

- Web accessibility (also referred to as a11y) is the design and creation of websites that can be used by everyone.
- Accessibility support is necessary to allow assistive technology to interpret web pages.

Disability Categories

- Visual
 - Auditory
 - Motor
 - Cognitive
-
- <https://webaim.org/intro/#people>

Screen reader

- A **screen reader** is a form of assistive technology (AT)^[1] that renders text and image content as speech or braille output. Screen readers are essential to people who are blind,^[2] and are useful to people who are visually impaired,^[2] illiterate, or have a learning disability.^[3]
 - https://en.wikipedia.org/wiki/Screen_reader

Screen readers

- NonVisual Desktop Access or NVDA, open source (Windows)
 - <https://webaim.org/articles/nvda/>
- JAWS (Windows)
 - <https://www.freedomscientific.com/Products/software/JAWS/>
 - <https://webaim.org/articles/jaws/>
- Voice Over (macOS)
 - <https://support.apple.com/guide/voiceover/turn-voiceover-on-or-off-vo2682/mac>
- Orca (Linux)
 - <https://wiki.gnome.org/Projects/Orca>

Accessibility Web Standards & Laws

- The Web Content Accessibility Guidelines (WCAG)
 - WCAG 2 Checklist
 - Decoding Label and Name for Accessibility
- United States Laws
 - Section 508 Checklist
- Laws Throughout the World
- <https://webaim.org/articles/#standards>

Demo Screen reader in action

Understanding how people with disabilities
will “see/hear” our application/site

Activity Accessibility Audit

Let's see what tools we can leverage

Tools

- **Axe** for Firefox and Chrome
- **Lighthouse** by Google
- Others
 - Tenon.io
 - SortSite (Desktop)

What type of accessibility issues may I encounter?

Activity

Fixing markup issues

Markup?

Let's fix our HTML issues

Activity

Fixing color contrast

Why is this important?

Tools

- **Contrast Checker**

- <https://webaim.org/resources/contrastchecker/>

- **Contrast with Chrome DevTools**

- <https://webaim.org/articles/contrast/devtools>

Let's fix our color contrast issues

Activity

Creating a “form”

No accessibility there!

Let's create our "register" form

Activity
Improving
accessibility in our
“form”

Let's improve our "register" form

Activity
Implement a “skip
to main content”
element

Let's add a “skip to main content” link

Activity

Understanding

React Spectrum

Tools

- **React Spectrum by Adobe**
 - A collection of libraries and tools that help you build adaptive, accessible, and robust user experiences.
 - <https://react-spectrum.adobe.com/>

Let's create a “form” with React Spectrum

Activity

Adding “prefer-color-scheme”

Let's create an adaptive app based on color
scheme of the user

Visual impairments

Tools

- **NoCoffee for Firefox**

- <https://addons.mozilla.org/en-US/firefox/addon/nocoffee/>

Demo

Simulating visual impairments

Demo

Deploy app to

Vercel

ARIA

Activity “aria-label” example

Automated Audits

Demo ESLint Plugin or React-axe?

Before we
go...

Being “inclusive” on the Web...

- It is not only about a language or gender
- Please, do not engage in toxic arguments
- **Let's make a better Web for everyone!**
 - With true empathy about others

Thank you!
